# Weekly bulletin

## COMMERCIAL OPPORTUNITIES

### Bulletin N° 49

Embassy of India in Caracas, prepares a weekly bulletin with the Indian exporters wishing to start trade relations with Venezuelan businesspeople. In this bulletin you may find a diverse array of goods and services to satisfy the commercial interest of your company.

**Food Processing Technology:** India's food processing industry is poised to grow at a robust pace on the back of a strong resource base and currently low levels of processing of food products. The sector provides vital linkages between the two pillars of the economy – agriculture and industry. Furthermore, India is the world's sixth largest food and grocery market, with a growing demand for processed and packaged food like yoghurt, cheese, ready-to-eat and processed food products. The processed food market is estimated at US\$ 543 billion in 2020, growing at an annual rate of 14.6% over the past few years. The market for plant and machinery in the food processing sector is projected to reach US\$ 51.41 billion in 2024-25 from US\$ 17.3 billion (2016-17). This potential is primarily led by cereals processing, dairy processing, prepared meals apart from other food products. During the same period, the fixed capital investment in the sector is expected to increase by more than two hundred per cent.
